Indian Standard SPECIFICATION FOR NYLON TAPES FOR AEROSPACE PURPOSES (First Revision)

O. FOREWORD

- 0.1 This Indian Standard (First Revision) was adopted by the Indian Standards Institution on 30 June 1979, after the draft finalized by the Textile Materials for Aerospace Purposes Sectional Committee had been approved by the Textile Division Council.
- 0.2 The tapes covered in the standard are used in the manufacture of various aerial delivery equipment including man-dropping parachutes.
- 0.3 This standard is based on IND/ADE/0603 'Tape, nylon, dyed/undyed' and IND/ADE/0072 'Tape, nylon, light, undyed/dyed', issued by the Ministry of Defence, Government of India.
- 0.4 This standard was first published in 1967. In this revision, 25'4-mm tape has been included at the instance of Chief Inspectorate of Textiles & Clothing, Kanpur.
- 0.5 To familiarize the industry with International System units (SI units), the basic as well as the recommended SI Units for use in the textile industry are given in Appendix A.
- 0.5.1 Standards of Weights and Measures Act, 1976 also stipulates use of SI Units.
- 0.6 For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS: 2-1960*. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

^{*}Rules for rounding off numerical values (revised).

1. SCOPE

1.1 This standard covers nylon tapes of 14, 19, 25, 32, 38, 44 and 25.4 mm width, generally used in the fabrication of parachutes and other aerial delivery equipment.

2. MATERIAL

2.1 Multifilament, bright and high tenacity nylon yarn of 23, 46 or 92 tex (as specified in the contract or order) shall be used in the manufacture of nylon tapes. The twist in the yarn shall not be less than 10 per metre both for warp and weft.

3. REQUIREMENTS

- 3.1 The nylon tapes shall meet the physical requirements given in Table 1.
- 3.2 The tapes shall further meet the chemical requirements given below:

Characteristic	Requirement	Method of Test
a) pH value	. 6.0 to 8.5	IS: 1390-1961*
b) Colour fastness	to:	
1) light	5 or better	IS: 686-1957† or IS: 2454-1967‡
2) washing	No colour bleeding on white cotton/ white wool	IS: 764-1979§

- 3.2.1 The tapes shall be free from tendering substances.
- 3.2.2 Dyed Tapes Acid/disperse dyes may be used; however, metallized/chrome dyes shall not be used [see IS: 4472 (Part III)-1973||].
- 3.3 The tapes shall be uniformly woven with firm and regular selvedges in 2/2 herring bone twill weave with one reversal. They should be free from weaving defects and stains.

TMethod for determination of colour fastness of textile materials to artificial light (xenon lamp).

§Method for determination of colour fastness of textile materials to washing: Test 3 (second revision).

||Methods for identification of application classes of dyes on textile materials:

^{*}Methods for determination of pH value of aqueous extracts of textile materials. †Method for determination of colour fastness of textile materials to daylight.

TABLE 1 PHYSICAL REQUIREMENTS OF NYLON TAPES

(Clause 3.1)

Note - This is a special light variety with high cover factor.

^{*}Methods for determination of length and width of fabrics (first revision). †Method for determination of thickness of weven and knitted fabrics.

Methods for determination of threads per decimetre in woven fabrics (first revision).

§Methods for determination of weight per square metre and weight per linear metre of fabrics (first revision).

[Method for determination of breaking load and elongation at break of weven textile fabrics (first revision).

IS: 4228 - 1979

3.4 In respect of requirements not covered in this standard the tapes shall not be inferior to the scaled sample agreed to in the cantract or order.

4. MARKING

- 4.1 Each roll shall bear a securely attached label with the following information:
 - a) Name of the material and its net mass (g);
 - b) Length (m), width (mm) and thickness (mm); and
 - c) Name/trade-mark of the manufacturer and the year of manufac-
 - 4.1.1 Each roll may also be marked with the ISI Certification Mark.

Note — The use of the ISI Certification Mark is governed by the provisions of the Indian Standards Institution (Certification Marks) Act and the Rules and Regulations made thereunder. The ISI Mark on products covered by an Indian Standard conveys the assurance that they have been produced to comply with the requirements of that standard under a well-defined system of inspection, testing and quality control which is devised and supervised by ISI and operated by the producer. ISI marked products are also continuously checked by ISI for conformity to that standard as a further safeguard. Details of conditions under which a licence for the use of the ISI Certification Mark may be granted to manufacturers or processors, may be obtained from the Indian Standards Institution.

5. PACKING

- 5.1 An appropriate number of rolls shall be arranged in a cylindrical bundle and secured by jute twine to form a pack. A suitable number of such packs shall be arranged and wrapped with polyethylene film of at least 40 microns thickness (see IS: 2508-1978*) and placed in a wooden packing case of adequate strength, previously lined with one layer of waterproof packing paper conforming to Grade 2 of IS: 1398-1968†. The empty spaces, if any, in the packing case shall be stuffed with cushioning materials to avoid damage in transit. The case shall be bound by iron hoops or wires. The gross mass of the case shall not exceed 40 kg.
- 5.2 Each case shall be marked with the consignment details as provided in the contract or order in addition to the markings given in 4.1.

6. SAMPLING

6.1 Lot — The quantity of nylon tape of the same width in a consignment shall constitute a lot.

^{*}Specification for low density polyethylene films (first revision). †Specification for packing paper, waterproof, bitumen-laminated (first revision).

6.2 Unless otherwise specified in the contract or order, the sampling plan given in Table 2 shall be followed.

TABLE 2 SAMPLE SIZE AND CRITERIA FOR CONFORMITY

(Clauses 6.2 and 6.2,2)

LOT SIZE (No. OF ROLLS)	Sample Size (for Length, Width, Mass, Trickness, Ends, Picks and Plies)	PERMISSIBLE NO, OF DE- FECTIVE ROLLS IN RESPECT OF TESTS ON SAMPLE ROLLS	SUB-SAMPLE SIZE (FOR BREAKING LOAD, ELONG- ATION, pH VALUE AND COLOUR FASTNESS)	PERMISSIBLE No. OF DEFEC- FIVE ROLLS IN RESPECT OF TESTS ON SUB-SAMPLE ROLLS
(1)	(2)	(3)	(4)	(5)
Up to 25 26 , 100 101 , 150 151 , 300 301 , 500 501 , 1 000 Above 1 000	3 5 8 13 20 50 80	0 0 0 0 1 1 2	3 4 5 7 8 9	None

Nore - 'Indian Standard sampling, inspection and testing scheme for aerospace materials' is under preparation.

- 6.2.1 Rolls shall be selected at random.
- 6.2.2 Sub-sample rolls specified in col 4 of Table 2 shall be drawn from the sample rolls selected according to col 2 of the table.
- 6.2.3 For breaking load and elongation test, an additional 2-m test sample from each of the sample rolls remaining after drawing the subsample (see 6.2.2) shall be taken if so specified in the contract.

APPENDIX A
