1. IMPORTANT NOTES

Note-1

This is only a provisional and will be amended from time to time according to the requirement. No addition, deletion and reproduction will be done without permission of The Sr. General Manager, Heavy Vehicles Factory, Avadi, Chennai – 54.

Note -2

Any instruction contained in this does not prejudice the terms and conditions of the contract what so ever. In case of any contradiction between the contents of this QAP and the clause in the contract, the latter will prevail.

Note-3

The stores should be manufactured strictly only as per the drawings supplied by the Inspection Authority and not as per the samples, if any received by the manufacturer for guidance purpose.

Note-4

Any amendment issued by the Inspection Authority shall be incorporated in the QAP and the records for the amendments carried out should be maintained as per the Performa at Appendix-"A".

Note-5

In case of any contradiction between the contents of this QAP and drawings / Specification / GOST issued along with the contract, the latter only will prevail.

2.INTRODUCTION

- This quality plan lays down the inspection and testing procedure to be carried out on the component BEARING 142220 OR 142220L2 TO DRG.NO ETY-500(142220) being procured indigenously. This is prepared, based on the acceptance standards and inspection parameters laid down in collaborators documents and on the inspection test standards followed in respect of similar indigenous items.
- 2. This QAP is the property of Government of India and is liable for amendments as and when required. The Sr. General Manager, Heavy Vehicles Factory, Avadi, Chennai 600 054, is the inspecting Authority for this assembly. Any query / clarification on the content of this QAP shall be referred to this Factory. Any departure from these instructions is allowed only after written approval from the above authority. Notwithstanding the tests indicated in this QAP, the inspecting Officer has the right to carry out any test to check conformance to the paper particulars quoted in the Supply Order, which he may consider necessary to satisfy himself about the stores which he has to accept.

3.<u>AIM</u>

The QAP is aimed at standardizing the Inspection procedure and acceptance norm for **BEARING 142220 OR 142220L2 TO DRG.NO:ETY-500(142220)**.

It also aims at giving adequate information to the manufacturer on the quality requirements so that the required quality control methods are established. This is also meant to guide authorized Inspection Officer in his routine inspection and to set out main points to which his attention must be drawn to ensure that the accepted stores meet the stipulated standards.

4. SCOPE:

This QAP outlines in general terms, the checks and methods to be used during inspection of **BEARING 142220 OR 142220L2 TO DRG. NO. ETY-500(142220)** including the technical requirements of the drawings. The recommended Quality Plan stipulated herein is mandatory and should be strictly adhered to.

For inspection purpose, only the latest issue of this QAP will be made applicable and copies of this QAP can be obtained from the issuing authority i.e. The Sr. General Manager, Heavy Vehicles Factory, Avadi, and Chennai.

Note:

- i. Tender enquiry (TE) and supply order (S.O) will be issued with QAP stating that inspection will be done as per QAP.
- ii. In case of TE, It is responsibility of the vendor to obtain the copy of QAP and give the statement of compliance that vendor will abide by the QAP in case supply order is placed.
- iii. In case of S.O, it is the responsible of the vendor to obtained copy of QAP and give the statement of compliance that the vendor will follow QAP. However, GM/HVF reserves the right to revise/update the QAP from time to time.

5. DOCUMENTS:

- a) On placement of firm supply order, One set of relevant specification and technical instructions on the subject item to be obtained by the contractor from AHSP through DDO/HVF
- b) Any clarification required on these documents to be obtained from the Inspecting Authority i.e. The Sr. General Manager, Heavy Vehicles Factory, Avadi, Chennai – 600 054. Equivalents to the collaborators specifications and standards will be decided only by the Inspecting Authority and should not be unilaterally decided. For any change in the specifications, standards or written approval, any alterations in specification can be affected and not otherwise.
- c) The process instruction sheets supplied by the collaborators are available with the Authority Holding Sealed Particulars, i.e. The Controllerate of Quality Assurance (Heavy Vehicles), Avadi, Chennai for the reference. The relevant process sheets may be studied at the premises of the AHSP after obtaining necessary permission.
- d) The supplier after scrutiny of the concerned process sheets and connected paper particulars should establish the necessary production and inspection facilities. Particularly the inspection test rigs, stands, fixtures, template, gauges etc should be provided as recommended in these process sheets. If process sheet / Process Book is not available the details particulars/parameters available in the drawings to be strictly adhered.

Page 5 of 15

6. ITEM USED ON:

1. 172.50.001CB-BCB - ROAD WHEEL ASSY.

7.LIST OF DRAWINGS:

SI. NO.	DRG. NO	NOMENCLATURE	REMARKS
	BEARING 142220	OR 142220L2 TO DRG.NO: E	TY-500(142220)
1	ETY:500	Outer ring	uit M
2	ETY:500	Inner ring	
3	ETY:500	Steel cage	May be Replaced with item 4
4	ETY:500	Brass cage	May be Replaced with item 3
5	ETY:500	Ball	

8. BILL OF MATERIALS: (Individual items as mentioned in table to Para 7)

SI. NO	DRG. NO NOMENCLATURE		MATERIAL SPECIFICATIONS
	BEARIN	G 142220 OR 142220	DL2 TO DRG.NO: ETY-500(142220)
1	ETY:500	Outer ring	WX15 GOST 801
2	ETY:500	Inner ring	WX15 GOST 801
3	ETY:500	Steel cage	Grade 08КП,08ПС, 08 GOST 1050-74
4	ETY:500	Brass cage	ЛЦ40С GOST 17711-80.
5	ETY:500	Ball	WX15 GOST 801.

Note: Vendor/Contractor may use approved alternate material if any specified in drawing/specification. *Also refer Para 13.

9. CONDITIONS OF USE/STORAGE INSTRUCTIONS

This assembly/item should be properly packed to protect from transit / handling damage and influence of atmospheric precipitations. In addition, the following parameters should be ensured:

- (a) The threaded parts if any should be covered with suitable plastic caps to prevent damages.
- (b) If the item consists of assemblies, each assembly should be packed separately.
- (c) The stores are to be suitably covered for preventing ingress of dust and Dirt/entry of sunlight / moisture.

ź

- (d) The packaging slip shall contains
 - (i) Certificate of testing- NABL Certificate.
 - (ii) Guarantee/ Warranty Certificate.
 - (iii) Service and maintenance instructions.

Page 6 of 15

- (iv) Delivery Slip with Inspector's Acceptance Mark.
- (v) Undertaking letter / certificate of conformance (As applicable).
- (e) The stores are not permitted to be stored together with oils. Petrol, acids, alkaline and other substances to avoid damage to the metal / rubber components.

10.SAMPLING PLAN:

· .

SI. No.	Sampling Plan	Pilot	Bulk
(i)	Visual Inspection	100%	100%
(ii)	Dimensional Inspection	100%	General Inspection level II, single sampling, Normal Inspection, AQL 1.5 functional item as per IS 2500 (Part-I)- 2000
(iii)	Material Inspection	100%	1 No for each batch of raw material or heat treatment lot as required by specification.
(iv)	Crack detection	100%	General Inspection level II, single sampling, Normal Inspection, AQL 1.5 functional item as per IS 2500 (Part-I)- 2000. Firm has to perform 100% crack detection and submit the report.
(v)	Demagnetization	100%	100%
(vi)	Radial/Axial Clearance	100%	100%
vii)	Crushing Load Test(Ball)	10 %	3 Pcs. From the batch as per GOST 3722 (Table-4)
viii)	Acceptance test	100%	100%
ix)	Machining / Fitment/ Performance trial on higher assembly / Tank	As per requirement	
x)	Test stand/Jigs/ Fixtures/Gauges/Man drels/etc.	100 %	100 %
xi)	Marking/Identification	100% (As per GOST/Spec ification)	100% (As per GOST/Specification)
xii)	Packing/ Preservation	100%	100%

Note:-

A New (First time supplier of this item) supplier should obtain clearance from HVF for bulk production which will be issued only after inspection/evaluation of pilot samples by HVF.

11. <u>VISUAL INSPECTION[Sampling plan as per Para- 10 (i)]</u>

The stores are to be visually examined on 100 % of pilot /bulk and same should be free from any defects and all the finishing requirements shall satisfy as indicated in technical conditions of the assembly / component drawing.

The components shall be checked for the following and should be free from the defects:

- Defects in construction
- Cracks/Dents/Scratches
- Fitment of all components
- Presence of foreign particles
- Moisture and dust
- Corrosion of metal parts
- Mechanical imperfections & distortion
- Any form of deterioration of material and finishing.

Packing and preservation should be ensured as per drawings/relevant TY specification (To be ensured on receipt at consignee end).

12. DIMENSIONAL CHECK[Sampling plan as per Para- 10(ii)]

The dimensions of individual component, sub assembly and major assembly shall be checked and ensured as per respective drawing. Dimensional check should be carried out as per sampling plan. However, the inspecting authority/rep. may at his discretion, tighten the inspection level and acceptance quality level on the critical items and adopt check point during manufacture.

12.1 BEARING 142220 OR 142220L2 TO DRG.NO ETY-500(142220)

The specified

- a) Inner dia. (ID): 100 mm (-0.20) as per Bearing GPZ (Page No:180).
- b) Outer dia. (OD) : 180 mm (-0.025) as per Bearing GPZ (Page No:180).
- c) Width (W) : outer race : 34 mm (+0.00, -0.200) as per Bearing GPZ (Page No:180)
- d) Width (W) : inner race : 34 mm (+0.00,-0.200) as per Bearing GPZ (Page No:180).
- e) Variable width of Races: 25 Micron (Max)
- f) Side Run out: 25 microns (Max) as per GOST 520...
- g) Corner Radius (r): 3.5 mm as per Bearing GPZ (Page No:180).
- h) Accuracy class "0" as per GOST 520
- i) Radial run out of outer ring (microns) : 45 as per GOST 520 table-3
- j) Axial run out of outer ring (microns) : 60 as per GOST 520 table-3
- k) Radial run out of inner ring (microns) : 25 as per GOST 520 table-2
- I) Axial run out of inner ring (microns): **50** as per GOST 520 table-2
- m) Surface finish (Ra) : Fitting surface of Bearing inner race (microns) Max: 1.25 as per GOST 520 table-1
- n) Surface finish (Ra) : Fitting surface of Bearing outer race (microns) Max: 1.25 as per GOST 520 table-1
- o) Surface finish (Ra) : Surface of faces of bearing race (microns) Max: 2.5 as per GOST 520 table-1

- p) Surface finish (Ra) : Ball bearings of class of accuracy 0 should be assembled with balls of degree of accuracy 40 (i.e.as per ETY 500) (Ref GOST 3722 for value of Ra)
- q) Radial clearance (microns) : 70 115 as per ETY 500
- r) Weight :4.00 Kg as per Bearing GPZ (Page No:180).

13) MATERIAL CHECKS [SAMPLING PLAN AS PARA - 10 (iii)].

Material specimen /test bars of the components shall be in conformity as per the material mentioned in the relevant documents/drawing. NABL test reports for all the parameters as per relevant specifications to be submitted. Test samples to be submitted by the vendor to HVF, if required. The material check will be carried out as per sampling plan. * However, if the manufacturer proposes any alternative material at the stage of tender enquiry, the same has to be approved and a written concurrence should be obtained from AHSP through DDO/HVF, before usage of such materials.

13.1 OUTER RING TO DRG.NO ETY-500, INNER RING TO DRG.NO:ETY:500 & BALL TO DRG.NO:ETY:500

a) The component should be manufactured from LIX15 GOST 801.

			Mas	s fractio	on of ele	ement, %			
Grade Of steel	Carbon	Silicon	Manganese	Chrome	Sulphur	Phosphorus	Nickel	Copper	Nickel +Copper
01001						Not m	ore that	an	
ШХ15	0.95 to 1.05	0.17 to 0.37	0.20 to 0.40	1.30 to 1.65	0.02	0.027	0.30	0.25	0.50

b) Chemical properties: As per ШX15 GOST 801.

Note: For mass fraction of other elements refer GOST 801.

c) Mechanical properties: As per ШХ15 GOST 801.

For details refer GOST 801.

d) Hardness:

a. Hardness of races : 61-65 (HRC) (As per GOST 520).

b. Hardness 63 . . . 67 HRC – with ball diameter up to 45 mm As per GOST

c. Hardness 61 . . . 67 HRC – with ball diameter more than 45 mm 3722 (para 2.3)

e) Alternate Material:

OUTER RING TO DRG.NO ETY-500 & INNER RING TO DRG.NO:ETY:500

- 1. SAE 52100 to ASTM A 295 -98 (For chemical), Mechanical properties as per OEM.
- 2. Grade 104Cr6 TO IS: 4398-1994.

BALL TO DRG.NO: ETY-500

- 1. Grade 535A99 BS:970 Pt-1 1983.
- 2. SAE 52100 to ASTM A 295 -98 (For chemical), Mechanical properties as per OEM.
- 3. EN 31 TO BS: 970.

13.2 STEEL CAGE TO DRG.NO: ETY: 500:

a) The component should be manufactured from Grade 08KI, 08IIC,08 GOST 503 & GOST 1050-74.

b) Chemical properties: As per Grade 08K∏, 08⊓C, 08 GOST 503 & GOST 1050-74.

STEEL		CONTENT OF ELEMENTS %								
GRADE	С	Si	Mn	Cr	Ni	S	P	Cu		
		0	IAISI			MAX				
08КП	0.05 to 0.12	0.03 max	0.25 to 0.50	0.10	0.25	0.040	0.035	0.25		
08IIC	0.05 to 0.11	0.05 to 0.17	0.35 to 0.65	0.10	0.25	0.040	0.035	0.25		
08	0.05 to 0.12	0.17 to 0.37	0.35 to 0.65	0.10	0.25	0.040	0.035	0.25		

Note: For mass fraction of other elements refer GOST 1050-74.

c) Mechanical properties: As per Grade 08КП, 08ПС, 08 GOST 503 & 1050-74.

For details refer

Grade 08KI, 08IIC, 08 GOST 503.

d) Alternate Material:

1. GRADE CR2/CR3 TO IS 513-2008.

13.3 BRASS CAGE TO DRG.NO: ETY: 500:

a) The component should be manufactured from Grade AL40C GOST 17711-80.

b) Chemical properties: As per Grade AL40C GOST 17711-80.

Grade of alloy		Chemical composition %									
As per GOST 17711-80	ļ	Ingre	dients	1		1		Impi	urities n	nax	
1111-00	Cu	Pb	Si	Sn	As	Mn	Fe	AI	Ni	Total	
							Max				
ЛЦ40С	57.0	0.8	0.3	0.5	0.05	0.5	0.8	0.5	1.0	2.0	
	61.0	- 2.0									

Note: For mass fraction of other elements refer GOST 17711-80 c) Mechanical Properties: As per Grade ALI40C GOST 17711-80

Grade of brass	Method of Casting	Ultimate tensile strength σB, Mpa (kgf/mm ²)	Relative elongation %	Brinell hardness HB
			Not less thar	1

Page 10 of 15

лц 40С	П (Р)	215(22)	12	70

Note: For other parameters refer GOST 17711-80.

d) Alternate Material:

1. Grade CuZn40Pb TO BS:-1400-1985.

2. GRADE 1 TO IS:319-2007.

13.4 LOAD CAPACITY:

- a. Static Load Ratings(C₉) : **125.0 kN** as per Bearing GPZ (Page No:117).
- b. Dynamic Load Ratings(C) : 183.0 kN as per Bearing GPZ (Page No:117).

14) ETCH TEST

The test piece should undergo etch test for the specified value and which is free from crack.

15) CRACK DETECTION

To detect crack in bulk (100%) it should involved in magniflux test (tested as per magna flux standard pieces).Bearing races & balls should be demagnetized 100%. Balls should not cracks, corrosion and similarly burn marks.

16) DEMAGNETIZATION

- a. Bearing races & balls should de-magnetize: Less than 3 gauss as per para-1.12 of GOST: 520-70. In general less than 3 Gauss is acceptable.
- b. Inclusion rating for race & balls: as per GOST: 801-78 table 4 & 5.

17) FITMENT AND PERFORMANCE TEST

- a. Pilot samples should be checked for fitment and Performance test to ascertain the efficacy of the system under different operating conditions by fitting in higher assembly and repeating it for functional checks, wherever required.
- b. Items of Bulk supplies may be subjected to performance trial in tank in case of repeated failure/defects during exploitation.

EXPLANATORY NOTE:

- The component may be subject to endurance test, when fitted in higher assembly as specified in process / illustration /TD book.
- 2) All other relevant test for acceptance of the item as specified in GOST / Specification / drawing shall be carried out by the firm and the report/ certificates shall be submitted to HVF.

18) CALIBRATION CHECKS

(TEST STANDS/JIGS/FIXTUERS/GAUGES/INSTRUMENTS):

The supplier / Contractor should have suitable Instruments, Test Stand, jigs, fixture, mandrels and gauges to carry out quality checks, to ensure conformance of components/assembly as per drawing and Specification /T.R points.

The supplier/contractor should submit calibration reports for instruments/fixtures/gauges/mandrels etc., which are used during process of inspection activities.

19) MARKING/IDENTIFICATION.

For traceability, marking of part No., Manufacturer name, supply order No, Serial No/Qty, batch No. and manufacture date & year are to be carried out. Suitable method can be adopted, provided that the above parameters are legible and considering the parameters mentioned in the drawing and specification.

20) PRESERVATION CHECK

- a) Preservative coatings are to be strictly adhered to as called for in the drawing. However, equivalent BIS Standards can also be followed, subject to the thickness of the coating/preservative is maintained as per the drawing/specification.
- b) Other preservations as necessary to prevent damages due to moisture and dust during process, storage and transit are to be carried out. Conventional Methods can also be resorted to.

21) PACKING CHECK

Components / Assemblies are to be packed separately to avoid damages during transit / handling of the same. Part No. and No. of sets are to be marked on the packing.

Packing and preservation should be ensured as per drawings/relevant TY specification (To be ensured on receipt at consignee end).

Finished products shall be wrapped / packed using black and opaque polyethylene sheet or bags.

22) DOCUMENTATION

- 1. Firm has to maintain all the documents as per QAP with respect to the SI.No.to have traceability.
- Vendor has to submit Bill of materials, Material test reports, Class 'C' /Endurance test reports (wherever specified in drawing/TY specification/QAP) and Complete PIR (pre-inspection report)at the time of offering the item for inspection. HVF will commence inspection only after scrutiny of these documents.
- 3. The testing/inspection responsibility to test all the parameters as per QAP and drawing specifications as mentioned in Annexure -A (enclosed).
- 4. Pre inspection reports (PIR) of firm like, 1. Chemical properties obtained from NABL as per bill of material (BOM) with respect to material specifications, 2. Hardness report, inclusion rating, micro structure and macro structure as per races and Balls, 3. NABL Calibration reports of instruments and gauges, 4.100% Dimensional inspection reports as per bill of material, 5. Static & dynamic load test reports. 6. 100% demagnetization report. 7. Ball crushing load test report.8. Crack detection report and Other relevant reports for acceptance of the item as specified in GOST/ Specification / drawings etc,...

23) <u>REFERENCE:</u>

BEARINGS AND OTHER PARTS FOR SPECIAL PURPOSE ARTICLES

Unified specification

ETY 500

Present unified specifications (ETY) supplements to GOST 520 and covers ball, roller and slide bearing and also other individual parts* and establish technical requirements for the bearings delivered for assembly of products of special purpose.

The name of bearings, balls and the rollers delivered as per the present specifications is specified in appendix A, B, B, Γ and Д.

The procedure for approving the application of bearings as per the present ETУ is established according to РД ВНИПП.097.

Conventional designation (part number) of the bearings and separate parts for ordering and in the customer's documentation bearings;

- Radial roller bearing with short cylindrical rollers, accuracy class 0, with radial clearance as per 6 series, with technical requirements as per ETV 500:

60-2214М ЕТУ500

- Roller, diameter 6 mm, length 12 mm with technical requirements as per ETV 500:

Roller 6x12 ETY 500

- Ball with nominal diameter 9 mm, degrees of accuracy 20, made of stainless steel, with technical requirements as per ETV500;

Ball 9-20 Ю ЕТУ 500

*Herein and further in the text individuals parts mean balls, rollers, needle rollers supplied as separate parts.

1. DEFINITIONS

1.1. In this unified specification (ETV), the terminologies specified in GOST 520, GOST 3325 are used.

2 GENERAL CONDITIONS

2.1 The design procedure, application and manufacturing of bearings as per the present specifications should correspond to Π BHUIII.001.

Technical project is the initial technical documentation for development/design of new types of bearings or modernization of existing designs of bearings.

The technical project is prepared by JSC" ВНИПП " as per customers demand for bearing.

2.2 According to the technical project, the JSC " $BHU\Pi\Pi$ " develops the design documentation on the bearing.

2.3 During development of drawings on bearings as per the present ETY, it is necessary to refer the following engineering specifications:

РТМ 37.006.057, РТМ 37.006.059, РТМ 37.006.062, РТМ 37.006.098, РТМ 37.006.258, РТМ 37.006.383, РТМ 37.006.424, РТМ 37.006.450, Н 453, Н 458, Н 461, Н 1363, РД ВНИПП.018, ОН 37, ОН 39, ОН 41.

2.4 All drawings of the bearings supplied as per present ETV is approved by the chief designer of JSC " $BHU\Pi\Pi\Pi$ ".

2.5 The manufacturer of bearings submits the list of bearings being manufactured to the JSC " BHUIIII " for approval and matching with B/Ψ 93603-C. In the list, specify the designation of bearings, inventory numbers of drawings and their letter type.

8	Sup.2	noti.22907			ETY 500	Page no.
AMND	Page	No. of Doc.	Sign.	Date		3

In case of absence of originals of drawings in the JSC " $BHU\Pi\Pi$, the enterprise - manufacturer offers to the JSC " $BHU\Pi\Pi\Pi$ " the complete set of drawings updated on the date of registration of the list.

2.6 The manufacturer as per the drawings of JSC " ВНИПП manufactures pilot batch (development batch) of bearings and carries out their testing on the bench (test jig) in compliance with PД 37.006.015.

As per the results of testing, a decision is taken regarding production of the bearings in compliance with PД 37.006.015.

2.7 The developed bearings should pass the operational test at least in three products.

Operational testing is carried out as per the program and methods developed by the designer of the products. As per the results of testing, prepare a report, which reflect the results of working of bearings in pilot products, including:

- Conventional designation and quantity of the tested samples of bearings;

- Modes and operating time of bearings;

- Conclusion about the condition of bearings after the testing;

- The decision about starting the mass production of the product and the service life of the bearing.

Extract from the report, signed by the technical director and the customer representative in his presence is sent to the JSC "BH μ IIII" and to the customer representative (Π 3 4).

If necessary, the manufacturers conclusion on bearings about the condition of bearings after the testing is also sent to JSC "ВНИПП" direct.

2.8 The JSC "ВНИПП", on the basis of positive results of testing carries out updating of the approval list and bearing drawings and assigns the letter type A for bearing drawings (spare parts).

						Page n
5	Sup.1	noti.22856			ЕТУ 500	1
AMND	Page	No. of Doc.	Sign.	Date		4

The given changes of the documentation are approved by the customer representative (Π 3 4).

Bearings (spare parts) with letter type A in agreement with the customer (Π 34) is entered in appendix A (B, B) of present ETV.

2.9 Changes in drawings of bearings as per appendix Γ and Д, and also change in the list of bearings and separate parts as per the specified appendix are done by the JSC "BHUIIII" without the approval of the customer representative.

2.10 The bearings, which have undergone changes, influencing the serviceability and commercial properties, should pass operational testing for the established service life.

The conclusion about the working of bearings after the testing in the products for established service life, and also results of their researches, should be sent to JSC "ВНИПП" for realization of necessary updating of the design documentation.

2.11 All test samples necessary for manufacturing are established by the manufacturer, approved by the technical director and agreed with the customer representative.

2.12 The manufacturer of bearings should carry out quality inspection of incoming metal.

Storage and release of metal for manufacturing should be done as per the instruction manual of the bearing manufacturer, which is coordinated with the customer representative.

The chemical compound, mechanical properties and other parameters of metals and the materials used for the manufacture of bearings and spare parts, should correspond to standards, present ETV or the industrial specifications and technical documentation.

TECHNICAL REQUIREMENTS.

3.1 GENERAL TECHNICAL REQUIREMENTS

3.1.1 Bearings and spare parts should correspond to requirements of GOST 520, GOST 3635, GOST 3722, GOST 4060, GOST 4657, GOST 5377, GOST 6870, GOST 7242, GOST 9592, GOST 22696, GOST 25255, of present ETV and the design documents (КД) approved in established order.

Technical requirements for seating surfaces of the bearings as per GOST 3325.

3.1.2 During presence of various requirements for one and the same parameters in the standards, industrial documentation, drawings and present ETV, the bearing and separate parts should meet the requirements stated in the present ETV.

3.1.3 Material for manufacturing parts of bearings should correspond to requirements GOST 503, GOST 800, GOST 801, GOST 4986, GOST 5663, GOST 9045, GOST 15527, GOST 17711, GOST 19851, GOST 21022, TY 37.103.020, TY 37.103.023, TY ВНИПП.080, TY 14-167-18, TY 14-4-563, TУ14-3-939, TY 14-3-940, TY 14-1-4360.

3.1.4 Surface roughness of the races of all sizes of annular, annular contact and spherical ball bearing of accuracy class O GOST 520 should not be more than Ra 0,16 microns as per GOST 2789.

Surface roughness of the races of all sizes of taper roller bearing of accuracy class 0 GOST 520, except bearing specified in 3.2.10 of present ETV, should not be more than Ra 0.32 microns as per GOST 2789.

						Page no.
9	Sup.3	noti.22915			ЕТУ 500	6
AMND	Page	No. of Doc.	Sign.	Date		U

The roughness of other surfaces of the specified bearings and all surfaces of bearings of other types and classes of accuracy should correspond to the drawings and РД ВНИПГТ.061.

3.1.5 The fillets (undercuts) at the sides of rings of roller bearings should correspond to РД ВНИПП.061 and should not have trimming.

3.1.6 The condition of surfaces of rings and rolling element of bearings should correspond to PД 37.006.084, PTM ВНИПП.004 (for balls of 100, 200 degrees of accuracy), Φ ВНИПП.001, and РТМ ВНИПП.008 and РТМ 37.006.041.

3.1.7 Burn marks and soft spots on working surfaces of rings and rolling element of bearings are not permitted.

3.1.8 Cracks on parts of bearings are not permitted

3.1.9 The microstructure of the material of parts of bearings (rings and rolling elements) after hardening and tempering should correspond to: made from steel ШХ15 - РТМВНИПП.155; made from сталей 8Х4В9Ф2-Ш (ЭЙ 347-Ш) and 95Х18 - РТМ ВНИПП.007; made from steel 15Г1-РТМВНИПП.113.

3.1.10 Rings, rolling elements of all bearings and separate parts, excepting bearings as per GOST 4060 should pass additional tempering for removing grinding stress according to И 37.006.099.

Additional tempering of rings and rolling elements are noted down in the register, approved in established order at the manufacturers end, and approved by the customer.

3.1.11 Hardness of parts of bearings should correspond to requirements of GOST 520.

3.1.12 Hardness of parts of the bearings made from steel ШХ15 (ШХ15-Ш), ШХ15СГ (ШХ15СГ-Ш) and ШХ15В and intended for operation at increased temperature should correspond to РД 37.006.134.

3.1.13 Usage of rings and rolling elements after repeated hardening, in case of their overheating is forbidden.

						Page r
7	Sup.2	noti.22905			ЕТУ 500	7
AMND	Page	No. of Doc.	Sign.	Date		/

3.1.14 Parts of bearings and separate parts should be demagnetized.

3.1.15 Ball bearings of class of accuracy 0 should be assembled with balls of degree of accuracy 40, classes of accuracy 6 and 5 with balls of degree of accuracy 20. Ball bearings with regulated level of vibration should be assembled with balls of degree of accuracy 16.

Annular bearings roller with short cylindrical rollers of class of accuracy 0 should be assembled with rollers of III degree of accuracy, classes of accuracy 6 and 5 with rollers of degree of accuracy II as per GOST 22696, and radial (annular) roller bearings with convex forming on rollers – in compliance with degrees of accuracy of TY 37.006.075.

Tapered bearing rollers of class of accuracy 0 should be assembled with rollers of degree of accuracy III, and classes of accuracy 6 and 5 - with rollers of degree of accuracy of II.

3.1.16 Radial and axial play in bearings should correspond to the values specified in appendix of this ETY.

The minimum unit values of radial play in the bearing should be within the lower limit established by the present specifications.

During transition to upper limit of unit values, the average radial play of each bearing should be within the limits, established by the present specifications.

3.1.17 Radial roller bearings with short cylindrical (plain) rollers can be supplied with non- interchangeable rings. During this on the face of both rings, there should be a serial number marking by electrography or any other method.

3.1.18 In the ball bearings, the radius of race profile is checked.

						Page no.
					ЕТУ 500	Q
AMND	Page	No. of Doc.	Sign.	Date		0

In roller bearings, the contact of rollers to the surface of the racer and to working sides of rings is inspected.

3.1.19 Chromium plating of assembly surfaces of bearings is not permitted.

3.1.20 Depth of case hardening or nitrocarburizing layer of retainer washers for bearings with long cylindrical and helical rollers should be within the limits of 0.05...0.2 mm.

On the external end faces of cage washers (retainer washer), layer of cyaniding or nitrocarburizing is not a compulsory.

3.1.21 It is permitted, if agreed with the customer representative, to carry out phosphating or oxidation of cages and protective washers according to I/ 37.006.078:

3.1.22 Presence of intermetallic inclusions (dark spots) on the surfaces of cages, manufactured from brass ЛЩ40C is permitted according to the material standards established by the manufacturer as per point 2.11 of present ETУ.

3.1.23 Manufacturing of internal rings of radial/annular and annular contact single-row ball bearings with two rounded off non-assembly chamfers is permitted during initial machining. During this for differentiating the base/datum face, it is necessary to apply mechanical (or any other) marking opposite to base/datum face.

3.1.24 Difference in thickness of racer tight rings of contact ball bearings of class of accuracy 0 should not be more than the value specified in table 1.

3.1.25 Value of radial and axial play of rings of the assembled bearings, face run out of base end face of internal rings with respect to the hole, inconstancy of width of internal rings of ball and roller of annular and annular-contact bearings of class of the accuracy 0, marked in the appendix with the sign¹⁾ should not be more than the value specified in table 2 and 3.

						Page no.
					ЕТУ 500	14
AMND	Page	No. of Doc.	Sign.	Date		14

3.2.3.2 During grinding from various datum, the tolerance on width of internal rings is established to minus 0.05 mm.

3.2.3.3 Distance from the end face of the roller of smaller diameter up to the middle line of Contact, l_k , in mm should correspond to:

 $l_k = 0.5 L_W \pm 0.15 L_W$ where L_W – roller length, in MM;

3.2.3.4 Contact of generatrix of races of the internal ring and rollers should not be less than 60 % of the active length of the roller.

3.2.3.5 The area of contact of end face of rollers to spherical surface of thrust/contact sides of internal rings should not be less than 60 % of the area of contact surfaces.

3.2.3.6 The tolerance on position of the basic plane of the roller relative to base/datum end face should be within limits as given below:

 For D_W upto 10 MM
 \pm 0.03 MM

 For D_W Above 10 to 30 MM
 \pm 0.04 MM

 For D_W Above 30MM
 \pm 0.05 MM

3.2.4 Bearings 64706, 64805, 64903, 64904, 64905 should rotate easily and freely.

3.2.5 Rings of radial annular bearings with long cylindrical rollers should correspond to requirements of РД 37.006.024.

3.2.6 Bearings 7508Y, 7511Y, 7806Y¹⁾.

3.2.6.1 Surface roughness of races of rings should not be more than R_a 0.16 microns as per GOST 2789.

3.2.7 while running the bearings with two protective washers or sealing, flow/leakage of grease between the washer or sealing and the external ring is not permitted.

						Page no.
					ЕТУ 500	15
AMND	Page	No. of Doc.	Sign.	Date		15

Insignificant flow/leakage of grease between the washer and the internal ring is permitted.

The amount of residual grease after the running in and modes of running in are given the table 7.

3.2.8 Assembly of taper double row bearings is carried out as per PTM 37.006.353.

3.2.9 Cardan Bearings.

3.2.9.1 Cardan bearings should correspond to requirements of drawings, present ETУ and TY BЫИПП.065. Manufacturing of bearings of high accuracy is carried out as agreed with the customer representative at the manufacturer's end.

3.2.9.2 Surface roughness of the external cylindrical surface of rings of cardan bearings 704702, 704702K, 804704K5, 804805K1, 904700V, 904700K should not be more than *Ra* 0.63 microns as per GOST 2789.

3.2.9.3 Play of the internal surface of the ring bottom of cardan bearings 904700V, 904700K, 704702, 704702K with respect to the generatrix of race/path should not be more than 0.015 mm.

3.2.9.4 Play of the internal surface of the ring bottom of cardan bearings 804704K5, 804805K1, 804707K3C10 relative to generatrix of external cylindrical surface during measurement of higher bottom diameter (at a distance of 1 mm from the face edge) should not exceed 0.1 mm.

3.2.10 Bearings 27308У, 27709У.

3.2.10.1 Race of rings is finish machined by method of super finishing; the surface roughness of their surfaces should be not more than *Ra* 0.16 micron as per GOST 2789.

3.2.10.2 Contact of rollers to the surfaces of race/path and active side of the internal ring is checked by blueing before the setting of cage, during this the area of contact of datum end faces of rollers to the support side of the internal rings should not be less than 80 % of the area of support surface of each roller. The form/shape and the dimension of prints should correspond to I/37.006.074.

AMND Page No. of Doc. Sign. Date	ЕТУ 500 Page no. 18
--	---------------------

3.2.10.3 Bearings 27308V1 which have passed contact test, are subjected to running in as per the technology of the manufacturer and approved by the customer representative at the manufacturers end.

The surface roughness of rolling surface of rollers and race/path of the internal ring after the running in should not be more than *Ra* 0.32 microns as per GOST 2789.

3.2.11 Ball bearing.

3.2.11.1 Ball bearing should correspond to requirements of GOST 3635 and РД 37.006.057.

3.2.11.2 Rings of bearing Ш8Ю5T should be coated with molybdenum disulphide as per И37.006.045.

3.2.12 Separate needle roller.

3.2.12.1 Separate needle roller should correspond to the values given in table 8.

3.2.13.Separate balls.

3.2.13.1. Balls Б 26.988-200±25, Б 26.988-200±150; 30.162-200+200;

Б 30.162-200-200; Б 31.75-200 \pm 20; Б 34.925-200 \pm 25 should be ground, not hardened; their hardness should be 170...207 HB; permissible surface roughness of these balls not more than *Ra* 2.5 microns as per GOST 2789.

3.2.13.2. Balls 34.925-200 should be supplied in the following classification group

1 group with diameter from	34.83 to 34.85 мм
2 group with diameter from	34.85 to 34.87 мм
3 group with diameter from	34.87 to 34.89 мм
4 group with diameter from	34.89 to 34.91 мм
5 group with diameter from	34.91 to 34.93 мм
6 group with diameter from	34.93 to 34.95 мм
7 group with diameter from	34.95 to 34.97 мм
8 group with diameter from	34.97 to 34.99 мм
9 group with diameter from	34.99 to 35.01 мм

Table 8- Requirement for rollers needle.

3.2.13.3 The balls specified in appendix B are supplied as per the order of the customer.

3.2.13.4 Stainless steel balls.

The balls having the designation index «Ю» are manufactured from stainless steel 95X18 GOST 5632 and 95X18-Ш ТУ 14-1-595.

Balls should be heat-treated up to 59...63 HRC.

Surface roughness of the balls is as per РД ВНИПП.061.

Burn marks, light spots, corrosion, cavity and cracks are not permitted.

Other requirements as per GOST 3722.

AMND	Page	No. of Doc.	Sign.	Date		20

3.3 Marking and packing.

3.3.2 It is permitted to mark the markings as given in the drawing on one of the ends or separately on to rings of the single piece roller bearing.

3.3.3 Single piece bearings with non-interchangeable rings should have the serial number applied by electro-graph method or other methods on the face of both the rings and on other single piece parts.

On the single piece bearing of (type 142000), the serial number should be on the face of the ring and on the cages.

The passport and the box with the packed single piece bearings and with noninterchangeable rings should have a clear inscription "non-interchangeable".

The marking may not be done on the interchangeable contact plane internal ring of bearing 142220Л2.

3.3.4 The passport/certificate of bearing 20-782726KM, 26-782726KM should have the actual value of size 99.8_{-0.5} мм (block: rollers and rings- intermediate).

						Page no.
4	Sup.1	noti.22450			ЕТУ 500	- 21
AMND	Page	No. of Doc.	Sign.	Date		21

3.3.5 In special cases, if agreed with the customer representative at the manufactures end, it is permitted to mark the conventional designation of the bearing, of the manufacture and design characteristics and year of manufacturing by electro-graphic, electro-chemical or chemical method.

3.3.6 Marking of tapered double row bearing as per PTM 37.006.353.

3.3.7 It is permitted to use the stocks of marking of bearing ring, which have the marking of the old year of manufacturing for the period of 1^{st} quarter of the subsequent year.

Transition to the marking of next year of manufacturing can be from the 4th quarter of the current year.

3.3.8 Preservation and packing of the bearings and separate parts is as per РД ВНИПП.003.

For bearings, which are supplied to the manufacturers of product, it is permitted to use other kinds of multiple use transportation container as per GOST 14861, which ensures the safety of the internal packing and does not permit moisture and does not emit corrosion active substances.

3.3.9 While packing the bearings 6-952132M, the roller set is wrapped in a paraffin paper and packed along with the rings.

3.3.10 Packing of bearings 6-322951ДМУ, 6-322951ЛМУ, 6-322948ЛМУ, 6-322948ЛМУ1 should ensure protection of the rings from transportation damages. Removable parts of the bearings are wrapped separately with paraffin paper as per GOST 9569.

Combined wrapping of removable parts is permitted under the condition that a lining of polyethylene film as per GOST 10354 of thickness 0.05-0.06 MM will be given between the block and the ring.

						Page no.
					ЕТУ 500	22
AMND	Page	No. of Doc.	Sign.	Date		

3.3.11 Packing of separate balls.

3.3.11.1 Number of balls 25.4-40 in one container should be multiples of 6.

3.3.11.2 Number of balls 30.162-200 in one container should be in multiples of 196. During this, 196 balls should be of the same-assortment group.

The set number, maximum and minimum actual ball diameters are specified in the packing box and in the certificate.

3.3.12 Inhibitor «AKOP» is not used while preserving the bearings, which are supplied to the customer as per present ETV.

Bearings and other parts which are manufactured as per present ETV can be stored at the manufacturer's store upto 6 months. After the completion of the period, the bearings and separate parts are subjected to re-preservation and the new guaranteed period of storage is indicated in the passport/certificate.

3.3.13 A certificate as per the established format should be kept in every box with the pack bearing (See appendix E).

A certificate as per format 1 as given in PTM 37.006.353 should be kept along with tapered double-row bearings.

AMND	Page	No. of Doc.	Sign.	Date		23

4 ACCEPTANCE RULE

4.1 The manufacturer carries out 100% inspection of bearings in compliance with the requirements of present specification and GOST 520.

4.2 Bearings which are supplied according to the present TV are subjected to total inspection of radial and axial clearance.

4.3 The customer representative has the right to check the bearings and separate parts for compliance to the requirements of present ETV.

4.4 For detecting the over-heating of rings, the rolling elements of the bearings and separate parts, except bearing rings as per GOST 4060 and GOST 3635 are subjected to total pickling in compliance with И 101, and the balls which have additional designation of index «Ю», in compliance with the manufacturer's manual prepared on the basis of И 111.

The percentage of inspection is established by the manufacturer in agreement with the customer's representative.

4.5 One bearing from the offered batch is sent to the laboratory for metallographic analysis and determination of the steel grade of the rings and the rolling elements.

One bearing from the batch is sent to the laboratory while offering the bearings in batches of less than 100 pcs.

For bearings with outer diameter above 300mm, it is permitted in agreement with the customers representative to send bearing parts from those which have been rejected by the inspection department for geometrical parameters while preparing the given batch for assembly and dispatch.

4.6 Chemical analysis is carried out whenever required by the inspection department of the manufacturer or by the customers representative, but not less than once in a month for every produced standard size as per the manual, which is approved by the customer's representative at the manufacturer's end.

						Page no.
					ЕТУ 500	24
AMND	Page	No. of Doc.	Sign.	Date		24

4.7 Percentage of checking of contact of the rollers to the race surface and to the active sides of the roller bearing rings is established by the manufacturer in agreement with the customer' representative.

4.8 Percentage of inspection of the bearing vibration level is established by the manufacturer in agreement with the customer's representative.

4.9 The manufacturer carries out periodical bench test of the bearings as per the present ETY in compliance with M37.006.086 and GOST 520 as per the schedule, agreed with the customer's representative at the manufacturers end.

In case of un-satisfactory results of periodic bench tests, careful analysis of the damages or destruction of the bearings is carried out in compliance with PTM BHUIII.010 for establishing the reason for the failure of the bearings till the lapse of 90% of the service life. Further acceptance and dispatch of the product is stopped. Acceptance and dispatch of the product is restored after taking necessary measures for rectification of the detected defects in agreement with the customer's representative.

4.10 Rings of all bearings, except rings of bearings as per GOST 4060 and rings of intermediate remote bearings are subjected to total inspection for cracks.

Rollers, balls and steel cages are subjected to random inspection for cracks.

Results of the above inspection are noted down in a special logbook of the inspection department, format of which is agreed with the customer's representative.

4 Sup 2 noti 22450 ETV 500								
4 Sup 2 noti 22450 FTV 500								Page no.
1 Sup.2 hou.22150	4	Sup.2	4	noti.22450			ЕТУ 500	25
AMND Page No. of Doc. Sign. Date	AMND	Page	AMND	No. of Doc.	Sign.	Date		25

4.11 If deviation from the present ETY is detected during the acceptance of bearings and separate parts for mechanical, chemical or metalographical parameters, then the whole batch is rejected and cannot be re-offered to the customer. The batch of bearings and other parts which have been rejected for other kinds of deviation are re-offered to the customer in approved established order after the rectification of defects and re-inspection by the inspection department.

During repeat offering of the batches of bearing and separate parts, the reasons for the deviation of the rejected bearings and separate parts, the measures taken for rectification of the same and the conclusion about the acceptance of these parts for second time offering are specified.

If in case during the repeat offering, the batch does not correspond to the requirements of present ETY, then the batch is returned back to the manufacturer and cannot be offered once more.

4.12 The customer carries out incoming inspection of bearings for radial or axial clearance as per the method applicable at the manufacturer's end.

5 METHODS OF TESTING

5.1 Testing the quality of the metal is carried out in compliance with РД ВНИПП.014.

It is permitted to determine the steel grade of bearing parts by spectral analysis method.

5.2 Checking the parameters of accuracy of rotation of the bearings can be as per the methods, which are in force at the bearing manufacturer under the conditions that the accuracy norms established in GOST 520 is ensured.

In case of difference of opinion, the final results will be the results of measurement as per the method established in GOST 520 and the corresponding technical documentation, specified in the present ETY.

5.3 While checking the linear dimensions, it is necessary to use PTM 37.006.270.

5.4 PTM BHИПП.008 and PTM 37.006.304 should be used while checking the assembly and non-active surfaces of the ball and roller bearings.

5.5 Checking of quality of gas nitro-cementation of parts of needle bearings made of steel 08КП, 10КП, 08Ю is carried out in compliance with PTM ВНИПП.113.

5.6 Inspection of rings of bearings, rollers and balls after the hardening and tempering should be carried-out as per PTM ΒΗИΠΠ.155 -for steel grades ШX15, ШX15CΓ, ШX15B and ШX15CΓB, as per PTMΒΗИΠΠ.007 - for steel grade 8X4B9Φ2-Ш (ЭИ347-Ш) and 95X18, as per PTM ΒΗИΠΠ.113- for steel grade 15Γ1.

5.7 Surface roughness of the bearing parts is checked by method of comparison with the specimen. In controversial case, decision of the laboratory of the bearing manufacturer is final. The result is based on the measurement of the surface roughness on the device taking into account the methods of PД 37.006.088 in compliance with GOST 2789 and GOST 25142.

						Page no
8	Sup.1	noti.22907			ЕТУ 500	27
AMND	Page	No. of Doc.	Sign.	Date		<i>L</i> I

5.8 Inspection of the rings for cracks is carried out by magnetic method or fluorescent magnetic particle inspection or luminescent crack detection method as per ИВНИПП.003 or И 37.006.031.

It is permitted to carryout the inspection of cracks of outer rings of taper roller bearings and inner rings of annular ball bearings of diameter upto 100mm on automatic crack detectors of types ДТ-201, ДТ-201M and ДТ- 202 with subsequent random inspection by magnetic-powder method.

Inspection of cracks of rollers, balls and heavy steel cages is carried out on magnetic crack detector or on devices which do not violates the inspection method and is approved by OAO "BH/IIIII", in compliance with the established technology.

5.9 Hardness of short cylindrical rollers is carried-out in 3 points on the cylindrical surface and in 3 points on one of the faces as per ИВНИПП.007.

5.10 Inspection of oxidation, cyanidation, phosphatizing, thickness and quality of plating should be carried-out as per the instruction manual of the manufacturer, which is approved by the customer's representative at the manufacturers end.

5.11 Inspection of residual de-magnetization of parts of bearings and separate parts and also of assembled bearings is as per II 37.006.032.

5.12 Measurement of geometric parameters and testing of the surface roughness is carried out by the inspection department at the work place and if required by the inspection department and customer's representative- every standard size is sent to the corresponding laboratory in the factory for testing not less than once in a month.

5.13 Instruction of the radial clearance of ball bearings is carried out on devices specified in the appendix. It is permitted to carryout the inspection of radial clearance on

						Page no.
8	Sup.2	noti.22907			ЕТУ 500	28
AMND	Page	No. of Doc.	Sign.	Date		28

devices AM-107M, AM-108M, M-525M and M-444

5.14 Inspection of radial clearance of roller bearings with short cylindrical roller is carried out on devices specified in the appendix. It is permitted to carry out the checking of radial clearance on device C-1, M-866.

5.15 Value of the radial clearance in the bearing is determined as the mean arithmetic value of three measurements by turning one of the rings at 120 $^{\circ}$. During assembly and checking, the minimum values of the radial clearance in the bearing should be within the lower limit established by the present specifications.

5.16 It is permitted to carry out the checking of radial clearance in spherical roller bearings with the help of feeler/probe, as per the procedure/method at the manufacturing premises – in agreement with the customer representative.

5.17 Checking of the axial clearance of radial ball bearings is carried out on devices specified in appendix. It is permitted to carry out the checking of axial clearance on device A - 123.

5.18 In one-piece radial ball bearings, the datum face should be from one side.

During non-datum machining, the inspection of position of the seating/groove axis should be from any end face

5.19 Inspection of radius race profile of ball bearings, except for one-piece rings with complex profile, rings having seating radius less than 3 mm, and rings of double row spherical radial ball bearings, is carried out with reference/standard (limiting) spherical gauge by blueing method according to I/ 37.006.074 or as per the instruction manual of the manufacturer in agreement with customer representative.

Checking of radius of race profile of ball bearings with seating radius less than 3mm and rings of double row radial ball is carried out with limiting disk gauges; checking of radius of race profile of one-piece rings of ball bearing with complex profile is carried

						Page no.
4	Sup.1	noti.22450			ЕТУ 500	29
AMND	Page	No. of Doc.	Sign.	Date		29

out with limiting template of complex profile.

5.20 Position of mean line of contact of rollers to the external ring (position of contact) of double row spherical roller bearings in assembled form is checked by blueing method.

Before introduction of the device for checking of the of radius of race of internal rings of double row spherical roller bearings, the checking of race is carried out by blue contact method by means of reference roller or specially made profile disk with nominal radius as per drawing.

5.21 Contact of the roller to the race surface and to active sides of rings of roller bearings is checked by blueing method according to I/ 37.006.074.

5.22 Checking of radial shift in bearings 6-97520V and 6-97520AV is carried out as per M 37.006.074.

5.23 Free rotation of bearings 64706, 64805, 64903, 64904, 64905 is checked by the technique developed by the manufacturer and approved by OAO "BH $U\Pi\Pi\Pi$ ".

5.24 Checking of bearings with two protective - washers or sealing for absence of flow/leakage of grease is carried out by checking the bearings by running-in method as per the technique of the manufacturer in agreement with the customer representative at the manufacturer's end.

5.25 Vibration level of bearing is checked as per M ВНИПП.003.

5.26 Checking of axial clearance of tapered double row bearing is carried out as per PTM 37.006.353.

6 GUARANTEE OF THE SUPPLIER

6.1 The manufacturer guarantees the working of 100 % of bearings in mass production products for the full service life as determined in the established order and as specified in the part list on application of bearings.

6.2.While supplying the bearings as per the contracts 93603-C, it is permitted to store them in supply condition in a non-heated warehouse which does not permit direct exposure to moisture, during this the warranty period of storage of bearings is 24months, and of bearings and separate parts preserved as per РДВНИПП.003 - 5 years.

6.3 Preservation and packing of the bearings, which are supplied as per present ETV should guarantee protection of bearings against corrosion for 24 months from the date of dispatch if the rules of storage are adhered to.

6.4 The manufacturer guarantees serviceability of bearings 20-2308Б1T2 in products ГДЛ-10Б for 11.5 years, from this 1 year is storage period in the warehouse in supply condition, 6 months prior to assembly (set making) of the product as per the instructions of the manufacturer and 10 years in finally assembled products by meeting the rules of storage as established in the instruction of the developer of products, during adherence of the following requirements by the customer:

1) The manufacturers of products should meet the requirements of РД ВНИПП.004 on storage, de-preservation and handling of bearings before mounting the bearings in the products;

Assembly of the products should be carried out as per the engineering specifications approved by the designer of the product, which is developed considering the requirements of РДВНИПП.004 regarding storage and protection of bearings from corrosion and observance of requirements of assembly, disassembly and operation of bearings.

ЕТУ 500	Page no.						
	21	ЕТУ 500					
AMND Page No. of Doc. Sign. Date	51		Date	Sign.	No. of Doc.	Page	AMND

3) While assembling the bearings in products, apply grease, which ensures preservation of the serviceability and protection from corrosion during the period of storage and operation of the product as stipulated in the engineering specifications on these products.

6.5 The manufacturer guarantees serviceability of bearings 20-308ЛT and 20-2308Б1T2 in products CГ-21, supplied to the main customer as spare parts and also in finally mounted products, for 10.5 years if requirements of sub-clause 1), 2), 3) point 6.4. of present ETV are adhered to by the customer.

APPENDIX E (mandatory) Specimen of the passport

Manufacturer			PASSPORT			
Conventional designation of the bearings or spare parts	Class or degree of accuracy	Quantity	Box number	Number of sheets in the passport	Additional specifications	

Bearings (separate parts) accepted by the inspection department corresponds to

<u>GOST...</u>

ETY (TY) and is approved for usage.

The manufacturer guarantees the serviceability of the bearing (separate parts) in products according to ETV (TV).....

Storage period of bearings (separate parts) in factory packing.....

End of appendix E;

Backside of the passport

ATTENTION!

1 The bearing and their part should be stored in the factory packing.

2.Boxes, initial packing materials should be opened only before assembly.

While mounting the bearings (parts) in the articles, it is necessary that the:

- closed bearings with protective washers and sealing, filled with working compound at the manufacturer's end should not be cleaned

- During the presence of protective consistent grease on the external surface, the same should be removed by wiping;

- During preservation with liquid inhibitor lubricants-carry out washing in petrol;

-During preservation with consistent lubricant- carry out heating in oil and washing in petrol;

-During de-preservation of ingot bearings-carry out washing in spirit or alcohol gasoline blend.

Similar methods of de-preservation are given in instruction manual of ОАО"ВНИПП".

3. During difference/shortage in quantity, type, sorting of bearings or their parts, the passport should be returned to the manufacturer.

The claims are not accepted without the passport of the manufacturer.
